

Training Course Licensing

SyntheSys is able to provide all the material you require to deliver your own TDL training. Licensed material will include separate packages for the instructor and student. The instructor package will include all presentations used in the current SyntheSys training courses as well as a user guide, while the student will receive copies of the presentations on CD to use as a reference after receiving the training. All material will be customised with your organisation's logo. If you require extra subject matter outside the standard course, this can also be arranged.

Available Courses

This licensing is available for any of our standard Tactical Data Link (TDL) training courses. These are currently as follows:

- Introduction to TDL (1 Day)
- Introduction to Link 11 (1 Day)
- Introduction to Link 22 (2 Days)
- Introduction to JTIDS/MIDS Link 16 (2½ Days)
- Introduction to Variable Message Format (VMF) (2½ Days)¹

Training Course Updates

Your material will be updated by SyntheSys when the source documentation changes or when new information is received by SyntheSys personnel attending technical forums.

Help Desk

For licensed users SyntheSys will provide an email help desk which will provide a response the next working day for any questions relating to the course subject matter. This help desk will give the trainers access to the full spectrum of expertise available within the Company.

Unlimited Use

Your license will allow your trainers to carry out any unlimited number of training courses using the customised material.

Licensed Trainers

Up to 12 named trainers may be licensed. These individuals will have access to all the facilities detailed above.

Cost

Licensing package available from as little as £17,000 for a five year period. For more information please contact training@synthesys.co.uk.

Although not a pre-requisite for licensing, it is suggested that your trainers would benefit from attending the corresponding training course before using the licensed material. This would ensure a full understanding of the material. For information regarding these courses please contact training@synthesys.co.uk, or see our website www.synthesys.co.uk.

¹ Certain distribution restrictions have been imposed upon VMF information. Please contact SyntheSys for information.
